QUESTION 1 • NETWORKS

Write the difference between public IP and private IP.

So, Public IP is when we use publicly available IP, which is, it could be, it can work on any method, while Private IP is one that works mainly on land. So, it doesn't mean if we try to access our particular device on our land, then the private IP, the Irish Private IP really access it. if we are on a different land, we try to put the same private ID address, but we won't be able to access that device. So, public ip is generally used by, of course, the internet say google.com, for example, but, the private ID will only be access to local area networks.
